

SUBJECT	Lower Secondary Maths Year 8
TOPIC	Module Two
ASSIGNMENT	Two
STUDENT NAME	

FEEDBACK AND REFLECTION:

- ☐ I have read the feedback on my last assignment carefully.
- ☐ I have considered whether any of that feedback is relevant to this assignment.

One thing I will try to do either the same or differently in this assignment as a result of my previous feedback is: _____

ASSIGNMENT GUIDANCE

- Make sure you write your full name clearly in the box at the top of this page.
- Please **write** your answers **by hand** in **black ink** on this question paper, unless you have obtained specific permission to submit typed work.
- This is not a timed assignment. We estimate that this assignment may take you between 30 and 40 minutes. However, if you need to take longer, then please do so.
- You are not expected to complete your assignments without referring to your notes or coursebook.
- In order for maximum marks to be awarded, for any question worth more than one mark, please show your workings to make your method clear.
- Calculators are **not** to be used in this assignment.

LS Maths Assignment Two

1. Use the **column method** to calculate the value of $61.4 + 43.8 - 17.2$. Be sure to make your methods clear, such as showing where you are carrying over and/or borrowing across.

(2 marks)

2. Show how **partitioning** can be used to work out the following additions. (Please note: no marks will be awarded for use of the column method.)

a. $47 + 15$

(2 marks)

b. $13.4 + 4.8$

(2 marks)

(Total 4 marks)

3. Show how **partitioning** can be used to work out the following subtractions. (Please note: no marks will be awarded for use of the column method.)

a. $82 - 35$ (2 marks)

b. $3.1 - 1.7$ (2 marks)

(Total 4 marks)

4. Show how you would give an estimate to the calculation. Then calculate the answer using column multiplication:

16×2.95

(2 marks)

5. Show clearly how you would work out the following:

a. $26 \div 0.4$ (2 marks)

b. $7.2 \div 0.09$ (2 marks)

(Total 4 marks)

6. Show how you can use short division to rewrite these fractions into decimals:

a. $\frac{7}{8}$ (2 marks)

b. $\frac{5}{12}$ **Hint.** This decimal recurs.
Try rewriting 5 as 5.00000 when you do the short or long division. (2 marks)

(Total 4 marks)

7. For the equation $y = 2x + 1$

a. Complete the table:

x	0	1	2	3	4
y					

(2 marks)

b. Draw axes with x from 0 to 4 and y from 0 to 10, and then draw the graph.

(4 marks)

(Total 6 marks)

8.

- a. Complete the table below, which relates the metric unit of kilometres with the imperial unit of miles. The approximate conversion is 5 miles = 8 km, so use the formula

$$\text{distance in kilometres} = \text{distance in miles} \times 1.6$$

Miles	0	5	10	20	50
Kilometres		8			

(4 marks)

- b. Use your values from the table in part a to draw a conversion graph. Set up the horizontal axes from 0 to 50 to represent miles, and the vertical axis from 0 to 80 to represent kilometres.
 (6 marks)

- c. Use your graph to find the number of km in 30 miles. You must draw the lines on the graph to show how you find your answer.
 (2 marks)

(Total 12 marks)

9. The distance-time graphs, 1, 2, 3, show the journeys of a pizza delivery van.

Descriptions of two journeys are given below.

- a. The rider returns to his starting point. His return journey is faster than his outward journey.
- b. The rider stopped to make a delivery, then carried on making another delivery further away

Match each of the descriptions to one of the graphs:

Description **a.** matches graph _____ (1 mark)

Description **b.** matches graph _____ (1 mark)

(Total 2 marks)

TOTAL FOR ASSIGNMENT 40 MARKS
